

# The Problem:

Quick, Easy and Intuitive access to information needed at sales counter that does not match standard fields like **NAME** or **ITEM NUMBER**

# The Solution:

## J-Search

Google-style entry to allow for searches on general words within your data.

Search returns a **summary** where you can selected from the list for detail much like they do on an internet search engine screen.

Optional display of **images** of documents associated with:  
processed invoices  
work orders with hand written notes
